

Committed to engineering your best solution:

SGC Engineering (SGC) offers a full range of civil engineering services to address any site development need. Our capabilities include both traditional civil engineering and environmental services. Our versatile staff provides responsive, knowledgeable, and cost-effective services in these areas through a dynamic, team-oriented environment, dedicated to being proactive and producing high quality deliverables.

We thrive on assisting our clients in all phases of their projects including conceptual planning, alternatives assessment, design, permitting, and construction monitoring.

SGC offers these Civil Engineering services:

Site Development / Infrastructure Design:

- Site development planning, evaluation, layout, and design
- Roadway and parking area design
- Stormwater runoff evaluation
- Stormwater management design
- Erosion control planning and design
- Water supply, treatment, storage, and distribution system design
- On-site wastewater treatment system design
- Wastewater collection system, pump station, and wastewater treatment plant design
- Review of development plans for municipalities
- Local, State, and Federal permitting support

Environmental Services

- Environmental Site Assessments
- Spill prevention control and countermeasure (SPCC) plans

Construction Phase Services:

- Construction bid phase management
- Preparation of cost estimates
- Review of shop drawings
- Field observation to ensure conformance with plans

The advantages of engaging SGC:

- Dedication to understanding and meeting the client's objectives through effective, proactive communication.
- Ability to work with local and state regulators to secure project approval and permits in a shorter time period.
- Focus on developing and implementing innovating solutions to meet client needs in a cost-effective manner.
