

Committed to engineering your best solution:

SGC Engineering (SGC) is a multidisciplinary engineering firm serving clients throughout North America. Established in 1999, SGC has a rich history of responsive, attentive service and deployment of advanced technology to provide cost-effective survey engineering services and engineered solutions for power transmission and distribution facilities, commercial and residential real-estate developments, water and wastewater treatment, stormwater management, and more.

SGC assists in achieving your goals:

With offices around New England and along the east coast, SGC is able to provide comprehensive engineering, environmental, construction management, and survey services to clients requiring responsive and professional services to meet their immediate and long-term business goals, regardless of location. SGC is particularly adept at gaining a thorough understanding of client needs, developing a detailed plan, exercising sound technical judgement, leveraging technology and navigating the regulatory landscape. To meet our clients' objectives, we work successfully with state and federal environmental agencies, municipal boards, communities, planners, and code enforcement staff.

SGC offers these professional services:

- Survey Engineering
- Power Systems Engineering and Design
- GIS & Data Management
- Civil Engineering
- Environmental Permitting
- Land Services
- Construction Management

The advantages of engaging SGC:

- Vigilant supervision and quality assurance to ensure compliance with project design specifications, schedule, and budget.
- Understanding of intangible or non-technical aspects which establishes and maintains good relations between the engineering and construction staff, the public, and other stakeholders.
- An appreciation for the interrelationship between the surveys, engineering, and construction; and the project's impact on local communities and regional development.
- A professional staff dedicated to serving the client and to responsive actions that ensure a successful project.
